

Problem Set Nine

Carl Pollard
The Ohio State University
Linguistics 680

November 30, 2011

These problems are due Tue. Dec. 6. They are based on the slides/handout entitled ‘Introduction to Linear Grammar’.

Problem 1

Provide an LG analysis of the sentence *Maria saw some donkey that brayed*.

Problem 2

Provide *two* LG analyses of the sentence *Every farmer saw some donkey*, corresponding to the two possible scopings of the QPs *every farmer* and *some donkey*.

Note: technically speaking, these two analyses correspond to two distinct sentences with the same pheno but different tectos and different semantics.
